**AM3** (AtlanMod MegaModel Management) is a
generic and extensible tool/framework
dedicated to global model management, i.e.,
the management of different modeling artifacts
as well as their interrelationships.

**Technological breakthrough:**
Support for all modeling artifact types and
relationship types (i.e., different metamodels
and relationship semantics).

**Possible application domains:**
Any project requiring the design, development
and use of global model management
solutions (i.e., chains of transformations,
model driven reverse engineering processes,
etc).

**Keywords:** MDA, MDE, modeling artifact,
megamodelling

**Language, standard, environment:** Eclipse,
EMF, Java

**Licence:** Eclipse Public License (EPL)

**Partner:**
