LimSee3 is a template-guided authoring tool for the creation of multimedia documents. It is particularly suited for Web applications.

LimSee3 can produce documents in SMIL format, a web standard, but also in other formats. Its high-level internal model enables it to disregard publication formats to adapt to the author and type of document that needs producing.

Language, standard, environment: Java language, available for Windows, Unix and Mac OS X

Keywords: Multimedia, Authoring, Publishing, Web

Licence: CeCILL

Developed with support from the European Commission IST programme.
