MoDisco is an Eclipse generic and extensible tool/framework providing to developers a set of reusable base components and dedicated to the elaboration of model driven reverse engineering (MDRE) solutions.

**Technological breakthrough:** Possible support for all types of legacy system (e.g., JEE), management of their size and complexity

**Possible application domains:** Any project requiring the design, development, deployment and use of solutions dedicated to the reverse engineering of legacy systems (e.g., for application modernization)

**Keywords:** MDA, MDE, model, reverse engineering, modernization, discoverer

**Language, standard, environment:** Eclipse, EMF, Java, OMG ADM

**License:** Eclipse Public License (EPL)

**Academic Partner:**
