

Press Release

Axellience announces the launch of the beta version of GenMyModel, a cloud-based modeling software tool

Only six months after winning the innovative company prize awarded by the Ministry of research, Axellience is proud to announce the launch of GenMyModel in an open beta version.

Based on research work carried out between 2008 and 2011 (at INRIA), GenMyModel is a software modeling tool which enables design and development teams to be more productive. What makes GenMyModel innovative is that it is the first real cloud-based modeling tool (which can be used with a simple web browser). With GenMyModel, Axellience's ambition is to provide development teams with tools which are not only more efficient, but more collaborative. By 2015 there will be more than 20 million developers worldwide (than 15 million in 2011)

In just a few weeks, several hundred developers from over 50 countries have joined the GenMyModel project through its beta version. Indian and American developers seem to be the more receptive to what the solution has to offer. For Axellience, the aim of the beta phase is to engage in conversations with the users in order to gain valuable feedback. This feedback will enable Axellience to better steer the product roadmap.

To try GenMyModel and to become a beta tester, you need to sign up on www.genmymodel.com .

About Axellience :

Axellience is a spin-off from the Inria Lille Nord - Europe Research Centre, created in 2012 by Alexis Muller, Thomas Legrand and Stéphane Deveaux. Located in Lille - Euratechnologies, Axellience is a 6 persons company. The project is sustained by the Ministry of Research, INRIA, MITI (regional Incubator), Nord-Pas de Calais Region, LMI (Lille Métropole Innovation), and REN (Réseau Entreprendre Nord).
