| Project                 | Description*                                                                                                                                     | Contacts                                                                  | Created |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|---------|
| <b>AI.Nature</b>        | Machine learning to facilitate the identification of poisonous or medically important snakes                                                     | <a href="#">Khosro Rajabizadeh</a>                                        | 2021    |
| <b>Anax Video 360°</b>  | 360-degree video editing software                                                                                                                | <a href="#">Navid Mahmoudian</a>                                          | 2021    |
| <b>CO-Idea</b>          | Augmented Collaboration at Work                                                                                                                  | <a href="#">Philippe Giraudeau</a>                                        | 2021    |
| <b>Cure</b>             | At the crossroads between traditional medicines and artificial intelligence, Cure aims to discover new molecules to improve health               | <a href="#">Moncef Belguechi</a>                                          | 2021    |
| <b><u>Drimaly</u></b>   | A game in which the universe adapts to the players, their choices and decisions                                                                  | <a href="#">Harold Blériot</a>                                            | 2021    |
| <b>EnergyScope</b>      | Optimization of the energy consumption of data centers                                                                                           | <a href="#">Hervé Mathieu</a>                                             | 2021    |
| <b>GeoSim</b>           | Scaling time and accuracy in mechanical CAD                                                                                                      | <a href="#">Nicolas Adam</a><br><a href="#">Cédric Adam</a>               | 2021    |
| <b>Greeneyes</b>        | Automation of weed control using computer vision and machine learning                                                                            | <a href="#">Ludovic Leau-Mercier</a>                                      | 2021    |
| <b>Louise</b>           | Application for monitoring female infertility and reproduction                                                                                   | <a href="#">Anais Grimal</a><br><a href="#">Atlal Boudir</a>              | 2021    |
| <b>Neuropin</b>         | Brain mapping solution for neurologists and radiologists                                                                                         | <a href="#">Antonia Machlouzarides Shalit</a>                             | 2021    |
| <b>Nijta</b>            | A SaaS solution to protect speech data, based on cutting edge voice anonymization                                                                | <a href="#">Brij Mohan Lal Srivastava</a>                                 | 2021    |
| <b>Optimo</b>           | Optimization solution for urban mobility                                                                                                         | <a href="#">Geoffrey Pruvost</a>                                          | 2021    |
| <b>Pulse</b>            | Smart glasses for the hearing impaired                                                                                                           | <a href="#">Manuel Pariente</a><br><a href="#">Thibaud Moufle-Milot</a>   | 2021    |
| <b>Sievable</b>         | Filtered search with machine learning                                                                                                            | <a href="#">Romain Zimmer</a>                                             | 2021    |
| <b>Sonaide</b>          | Analysis of ambient sounds for the detection of loss of autonomy and analysis of noise pollution                                                 | <a href="#">Nicolas Turpault</a>                                          | 2021    |
| <b>Studio Pose</b>      | A toolbox to integrate the body position estimation in sport and entertainment applications                                                      | <a href="#">Léonard Torossion</a><br><a href="#">Guillaume Adam</a>       | 2021    |
| <b>Switch</b>           | Accelerate the advent of effective treatments for patients with neurodegenerative diseases                                                       | <a href="#">Igor Koval</a>                                                | 2021    |
| <b><u>Unsearch</u></b>  | Unsearch improves mainstream search engines like Google Search by specializing them on topics that matter to you                                 | <a href="#">Jean-Baptiste Piacentino</a><br><a href="#">Tristan Nitot</a> | 2021    |
| <b>Urdone Transform</b> | Transformation of heterogeneous data for enterprise applications                                                                                 | <a href="#">Jérémy Bénard</a>                                             | 2021    |
| <b>4IoT</b>             | Retrofitting legacy machines for IoT enablement                                                                                                  | <a href="#">Allex Oliveira</a>                                            | 2020    |
| <b><u>AgriBloT</u></b>  | A data sharing solution for agriculture                                                                                                          | <a href="#">Oscar Roberto Bastos</a>                                      | 2020    |
| <b><u>Alias</u></b>     | A decentralized authorization management technology enabling to scale data portability through smart contracts and simple legal user experiences | <a href="#">Mehdi Medjaoui</a>                                            | 2020    |
| <b><u>Aureax</u></b>    | Touch-based turn-by-turn wearable for cyclists, allowing for eye-free, ear-free, safer navigation                                                | <a href="#">Julien Decaudin</a>                                           | 2020    |

|                                  |                                                                                                                                                                                                                              |                                                      |      |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------|------|
| <b><u>Avacar</u></b>             | Avacar enables to put a human back behind the wheel to deploy the fleets of autonomous vehicles                                                                                                                              | <u>Pierre de Beaucorps</u>                           | 2020 |
| <b><u>AXIOME</u></b>             | An intelligent tutoring assistant to differentiate teaching of mathematics                                                                                                                                                   | <u>Yassine Esmili</u><br><u>Mehdi Douch</u>          | 2020 |
| <b>Beat2Bits</b>                 | Beat2Bits is a startup company that aims at filtering, processing and interpreting physiological data extracted from broadly available sensors and present it in a meaningful way to practitioners                           | <u>Guillaume Attuel</u><br><u>Edouard Kleinpeter</u> | 2020 |
| <b>CrowFox</b>                   | CrowFox aims to develop robots that pick-up litter and collect waste in outdoor public spaces                                                                                                                                | <u>Vincent Le Doze</u>                               | 2020 |
| <b>Daspren</b>                   | Ransomware detection                                                                                                                                                                                                         | <u>Belkacem Teibi</u>                                | 2020 |
| <b>DeepSketch</b>                | Lift to 3D a sketch drawn in 2D                                                                                                                                                                                              | <u>Adrien Bousseau</u><br><u>Bastien Wailly</u>      | 2020 |
| <b><u>Délice Robotics</u></b>    | At Délice Robotics we are working on the next generation of food preparation and vending                                                                                                                                     | <u>Anshul Paigwar</u>                                | 2020 |
| <b><u>FANTÔME</u></b>            | Anatomical mannequins for medical training and simulation                                                                                                                                                                    | <u>Tomas Svaton</u>                                  | 2020 |
| <b><u>Flit Sport</u></b>         | Flit Sport develops a digital running coach which individualizes training progression based on every runner's personal profile                                                                                               | <u>Pierre Gilfriche</u>                              | 2020 |
| <b><u>Greenfarm Robotics</u></b> | New generation of drawings (alt to tractors) for agriculture - autonomous, reliable, and suspended: no dependency to soil conditions nor topology, and without soil compaction - for an economic and sustainable agriculture | <u>Laurent Blanchet</u>                              | 2020 |
| <b>ImprEvo</b>                   | ImprEvo is a solution that optimizes the E-commerce website conversion rates using artificial evolution algorithms                                                                                                           | <u>Omar Abdelkafi</u>                                | 2020 |
| <b>Introspection</b>             | Real-time intrusion prevention and vulnerability detection leveraging continuous system analysis                                                                                                                             | <u>Byron Hawkins</u>                                 | 2020 |
| <b>IPYA</b>                      | A multi-task pedestrian protection system                                                                                                                                                                                    | <u>Danut-Ovidiu Pop</u>                              | 2020 |
| <b><u>Naimrod</u></b>            | Binge learn Chinese                                                                                                                                                                                                          | <u>Benedict O'Donnell</u>                            | 2020 |
| <b>OuiChef</b>                   | An online platform for connecting chefs and event organizers                                                                                                                                                                 | <u>Samir Perlaza</u><br><u>Rutger Eysvogel</u>       | 2020 |
|                                  |                                                                                                                                                                                                                              |                                                      |      |
| <b><u>qatent</u></b>             | qatent applies Natural Language Generation and machine learning to write better patent applications faster                                                                                                                   | <u>François Veltz</u>                                | 2020 |
